

Software Testing Foundations

Course title: Software Testing Foundations

Course duration: 1 day

Designed for:

- New Testers looking for practical advice on how to do better testing
- Non Testers looking to understand how great testing can add value rather than being a cost centre
- Experienced Testers looking for a software testing refresher

Objectives:

- Why do we test software?
- Why software testing is so much more than clicking buttons
- The role of automation in software testing
- What does world class testing look like?

Topics:

- What is software testing?
- How does it provide value?
- Who does software testing?
- How testing is more than “breaking the software” & finding bugs
- How we as humans are flawed thinkers & the impact that has on software development
- How important communication is to developing great software
- What impact social science & behavioural economics has on software development
- Software testing is a craft

Prerequisites:

- None
