RESPIRATORY SYNCYTIAL VIRUS, or RSV, is a dangerous virus that can lead to:

- Hospitalization
- Lifelong health complications
- Death for infants and young children.

ACCORDING TO A NATIONAL SURVEY,

**Specialty Health Care Providers say:**

- They treat RSV as a priority, “often” or “always” evaluating their patients (80%)
- RSV is the “most serious and dangerous” illness for children under four (77%)
- Barriers to access and denials from insurance companies limit patients’ ability to get preventive RSV treatment (77%)

But Parents are Unprepared.

- Only 18% know “a lot” about RSV
- Only 22% consider themselves “very well” prepared to prevent RSV

RSV EDUCATION & AWARENESS CAN HELP

After parents learned more about RSV, they were:

- 65% “More concerned” about their child contracting the disease
- 67% Likely to ask their doctor about RSV

Survey Says: RSV
