

Cebu Stone is an innovative, cost effective, and durable thin block veneer. Available in several textures and finishes, Cebu Stone combines classic aesthetics with ease of installation for both new construction and remodel projects.

Cebu stone installation rates are many times faster than traditional masonry systems thanks to the exclusive AccuTab Set System. This system produces an efficient and accurate installation with its cast in place tab that provides a built-in mortar joint. Cebu Stone is typically painted after installation, but can also be manufactured with integral color added.

Cebu Stone manufactures a full line of thin concrete masonry veneer units to complete your project, including universal corner blocks and trim pieces. We maintain sufficient stock to get your project started and finished on time.

Cebu Stone can be used over, or in conjunction with, the following substrates:

- masonry surfaces (tilt up, CMU)
- wood framing
- metal studs
- combined substrate overlaps (masonry adjoining framing)

Cebu Stone has been successfully installed on many projects including fast food chain stores, national car care service stations, strip mall shopping centers, and industrial and light commercial buildings.

Contact us to learn more about Cebu Stone and how you can take advantage of this unique system in your projects! For more information visit our website at www.cebustone.com.
