

Cebu Stone is an innovative, cost effective, and durable thin block veneer. Available in several textures and finishes, Cebu Stone combines classic aesthetics with ease of installation for both new construction and remodel projects.

Cebu Stone's exclusive AccuTab Set System provides an efficient and expedited installation with its cast in place tab which allows for an accurate built-in mortar joint. Installation rates are many times faster than traditional masonry systems. Cebu Stone is typically painted after installation, but can also be manufactured with integral color.

Cebu Stone manufactures a full line of thin concrete masonry veneer units to complete your project, including corner blocks and trim pieces. Add the beauty, texture and rough hewn look of splitface block to interior or exterior projects. Design options are limitless.

Cebu Stone can be used over, or in conjunction with, the following substrates:

- masonry surfaces (tilt up, CMU)
- wood framing
- metal studs
- combined substrate overlaps (masonry adjoining framing)

Your projects may also achieve LEED credits 3.1, 3.2, 4.1, 4.2, 5.1, and 5.2 through conservation of materials and resources. Cebu Stone has been successfully installed on many projects including fast food chain stores, national car care service stations, strip mall shopping centers, and industrial and light commercial buildings.
