President and Business Development Manager
Therapeutic Systems Research Laboratories Inc

Date: Friday, November 11
Time: 9:00am
Location: **B448 Life Science**

“The TSRL Preclinical Accelerator: Driving Value from Lead to Clinic”

Therapeutic Systems Research Laboratories (TSRL), Inc., is a privately-owned pharmaceutical specialty company based in Ann Arbor, Michigan. Through our preclinical accelerator model, we partner with academic investigators to advance their promising lead-stage therapeutic concepts to clinical-readiness by providing scientific and business expertise and access to capital. Our core competencies include pharmacokinetics, formulation development, toxicology, data and project management, regulatory strategy, grant-writing, and business development. Our portfolio programs have received over \$15 million in grant support over the past ten years and generated ~\$20 million in revenues from out-licenses and acquisitions. A strategic priority for us continues to be the development of new anti-infective therapeutics for treating severe and multi-drug resistant infectious diseases, with an emphasis on viral and bacterial infections.
