Deciphering Sensory Processing
A 4-week Intensive Study Group for Professionals
Facilitated by Dr. Jamie Chaves, OTD, OTR/L, SWC

Sensory information pervades our lives: how our clothes feel, what the air smells like, what the radio is playing, how we navigate a busy room, how we sit upright in a chair, what our food tastes like, how bright the sun appears... How do our brains make sense of this constant bombardment of information? What happens when our brains take in too much of this information? What happens when our brains take in too little of this information? How do sensory integration issues impact school and work performance? Discovering the answers to these questions will open up a world of understanding to your own sensory needs, as well as relate to the sensory needs of others around you.

This 4-week course will address sensory processing as a whole, dissect each of the eight sensory systems, and discuss how sensory input impacts daily functioning and regulation—all of which will give you another lens with which to view the behaviors of clients. And it will provide you tools to recognize the need for an Occupational Therapy evaluation!

Dates: October 5-26, 2019
Day/Time: Saturdays, 8-10am
Location: 3030 E Colorado Blvd, Pasadena, CA 91107
Cost: $120/session ($480 total)
