We’re a tech cooperative that helps organizations navigate the complexities of enterprise software.

No matter the system, we can evaluate where you’re at and what you need, and help you implement or upgrade. We work with PeopleSoft, Oracle, SAP, Workday, Lawson and more.

INSIGHTFUL ANALYSIS

Beyond their in-depth knowledge of enterprise software, our consultants understand why organizations need to upgrade or add functionality. They also know how to work with stakeholders to explain the benefits. Our consultants can provide end-to-end service on installations and upgrades, including:

- Assessment of your current state
- Package consultation
- Custom app development
- Plan development and project management for your desired goal

SKILLED INTEGRATION

With apps for Procurement, Supply Chain Management, Financials, CRM, Human Capital Management and Campus Solutions, enterprise software is expandable and flexible for your needs. But like any new tool, enterprise software can only work to its potential when it has been well integrated with other systems.

- Integrate custom apps and upgrades with legacy systems.
- Utilize and integrate with appropriate architecture.
- Rely on tried & true solutions, honed through firsthand experience.

OUR SUCCESS SAYS IT ALL:

- Staff around 100 consultants per year.
- Work with Fortune 500, higher education and state governments clients.
- Five straight years with revenue around $10 million.

“Iceberg’s consultants are innovative and client-focused. They think of the client’s needs first. I really appreciated their honesty—good news or bad news—and their ability to deal with any problem that came their way.”
