

OpenText™ ApplicationXtender Connector

Out-of-the-box seamless integration with Microsoft®
Windows® applications

Many organizations continually face the challenge of how to access the right documents when they need them. ApplicationXtender Connector is designed to solve this challenge by making business-critical documents and information easily accessible. It delivers seamless content-enabling capabilities so that organizations can integrate their core business applications with ApplicationXtender content management software.

ApplicationXtender Connector's powerful integration capabilities are achieved without the need for time-consuming API programming. With the ApplicationXtender Connector, users can instantly retrieve documents and information in the ApplicationXtender repository right from their core business applications. Users simply press a "hot key" or click a button and the ApplicationXtender Connector displays the associated documents. With no additional user interaction, they can immediately access and review documents within ApplicationXtender.

Productivity gains and significant time savings

ApplicationXtender Connector improves the quality and effectiveness of business activities by increasing productivity and optimizing business processes. Easy to learn and intuitive to use, ApplicationXtender Connector makes document retrieval quick and easy.

The following use cases illustrate ApplicationXtender Connector's efficiency and time saving:

BENEFITS

- *Seamlessly integrate OpenText™ ApplicationXtender with any Microsoft® Windows®-based business application with no coding required*
- *Easily query and view documents list within ApplicationXtender from any Windows-based application*
- *Quickly import any document into ApplicationXtender from any Windows-based application*
- *Conveniently view documents without the need for the native applications to be available locally and take advantage of intuitive web viewing capabilities, including scanning documents and support for annotations and redactions*
- *Quickly push deployment packages using Microsoft Click Once technology*

- **Accounts Receivable processing**—To confirm receipt of goods, a user working in an accounting application can use a purchase order number to access a corresponding invoice, packing slip, and shipping form, as well as delivery confirmation documentation in the ApplicationXtender repository without having to leave the accounting application
- **Human Resource new employee onboarding**—To confirm if a new employee has received and signed all required documents, the HR application user can use the employee's unique number to list all documents provided to the employee, and then validate if they have all been signed without having to leave the HR application
- **Contract management processing**—Legal is reviewing a contract dispute and is required to retrieve all documents that have been stored in the legal department, HR department, and AP/AR departments. Using ApplicationXtender Connector, a lawyer can retrieve all documents that contain key words from multiple repositories in ApplicationXtender without having to leave their contract's application. Additionally, as a lawyer receives new or revised contracts, they can easily import them into the ApplicationXtender repository.

Producing business-critical documents on demand, organizations can make use of information to eliminate redundancy, deliver high-quality customer service, improve efficiency, and enhance overall business performance.

Seamless document-enabling capabilities

An innovative solution, ApplicationXtender Connector offers exceptional screenscraping technologies and integrates host applications including Rumba, Client Access, and Reflections products; Microsoft® Windows®-based applications; and web browser-based applications.

ApplicationXtender Connector allows organizations to leverage information in their line of business applications, such as Microsoft® Dynamics®, Sage Software, PeopleSoft®,

Lawson, Brass Ring, and many other Microsoft Windows-based applications, with the powerful content management capabilities of ApplicationXtender.

Built for low touch IT management

With IT organizations managing many applications and spread thin, ApplicationXtender Connector aims to help organizations reduce their end-user training requirements by using one application. With the simple touch of a button, or pressing a hotkey sequence, an end-user can obtain the list of documents for which they are searching.

In addition, with the auto-login feature, business end users can be sure ApplicationXtender Connector is running in the background of their applications.

An application task can be configured by IT using an easy-to-use, point-and-click task administration utility. The intuitive administrator's UI allows the IT personnel to quickly set up and configure the Accounting, Human Resources, and contract applications with the ApplicationXtender Connector. Once deployment packages are created, using

Microsoft Click Once technology, IT can customize how and when the packages are deployed, thereby reducing the need for IT to go to each desktop to install new updates.

Simplified connectivity to applications provides key benefits

With timely access to critical business documents and information, organizations can improve their business decisions and raise the levels of customer service and overall customer satisfaction. ApplicationXtender Connector's ability to seamlessly access documents and information directly from any Microsoft Windows-based business application helps improve efficiency and enhance business performance. The out-of-the-box integration capabilities that the ApplicationXtender Connector provides, with no ongoing programming and maintenance involved, helps organizations reduce support costs, boost productivity levels, and quickly achieve their business revenue and growth goal. ApplicationXtender Connector's integration and seamless access to documents and information and to many business applications, including Microsoft, helps improve efficiency and enhance business.
