**ANDREW CONSULTING ENGINEERS HIRES THREE NEW EMPLOYEES
TO ACCOMMODATE GROWTH AND NEW PROJECTS**

WILMINGTON, NC – Andrew Consulting Engineers has recently hired three new employees to provide engineering and drafting services to meet the growing demands of existing and new projects. The new employees include David Turner as project engineer; Robert Williams as Drafting Technician and Jesse Bishop as Drafting Technician Intern.

“We’re proud to welcome David, Robert and Jesse to the team and the skills and experience they bring have already had a very positive impact on the firm,” said Neal Andrew, president of Andrew Consulting Engineers. “We’ve grown by 25% over the past six months, from a staff 12 to 15, and that growth has come quickly on the heels of winning several new contracts. We’ve been very busy with a number of local and regional projects, including the new cofferdam at the Battleship North Carolina, a dredging project at Hammond Beach State Park, the new Shipyard Fire Station and a two-year contract with the Cape Fear Public Utility Authority.”

David Turner joined Andrew Consulting Engineers in March of this year. As Project Engineer, his responsibilities include the analysis and design of low to mid-rise buildings, marine construction and the structural evaluation and repair of existing buildings and marine structures. Turner is a graduate of Virginia Military Institute with a B.S. in Civil Engineering. He obtained a Master’s Degree in Structural Engineering and Mechanics from Colorado State University. Turner is originally from Roanoke, VA.

Robert Williams, a native of Wilmington, NC, is not new to Andrew Consulting Engineers, as he was previously employed as a drafting technician from 2007 to 2011. Prior to rejoining the firm last fall, Williams worked as a drafting technician at Elementis Chromium, a global specialty chemicals company with operations worldwide, including a plant location in Wilmington, NC. Williams is a 2003 graduate of Cape Fear Community College with a certificate in architectural drafting. As a drafting technician, Williams creates drawings in Auto-CAD or Revit of engineer’s sketches and concepts.

Jesse Bishop joined Andrew Consulting Engineers in November 2015 and works part-time while pursuing an Associate’s Degree in architectural technology from Cape Fear Community College. As a drafting technician intern, Bishop works in Auto-CAD and Rivet to draft working drawings and assists the firm’s engineers in a wide variety of capacities. Bishop is a native of New Bern, NC.

-more-

Established in February 2004, Andrew Consulting Engineers is a full-service structural engineering firm that provides structural, forensic, marine and forensic engineering services for companies, organizations and state and local governments throughout the southeast. The work of ACE engineers ensures that the region's built environment has the structural integrity to stand the test of time. Andrew Consulting Engineers has worked on everything from the Wilmington Riverwalk and Carolina Beach State Park Marina to Cape Fear Community College's Union Station and GE's Global Laser Enrichment Selective Isotope Laser Excitation Test Lab.

Andrew Consulting Engineers is headquartered at 3811 Peachtree Avenue in Wilmington, NC. For additional information, go to www.andrewengineers.com.
