Scott Eye Care Center

"INTEGRATING LOCAL & FOCAL SYNTONIC OPTOMETRY IN A BEHAVIORAL OPTOMETRIC OFFICE"

You can apply Syntonic Optometry - Syntonic Phototherapy with different Therapy Techniques.

The most common methods are: Trans-lid, Static, Dynamic, Indirect, Integrative with and during VT and Focal - Local Syntonic Optometry.

Local-Focal Syntonic Optometry is a method applying specific light wavelengths to extrinsic Muscle points, and other vision points on the body to bring about an energetic balance to improve visual function. It has been tested on a variety of vision problems, with Syntonic Optometric testing before and after to determine the immediate response.

This seminar will be a journey into the basic underlying components of Local-Focal Syntonic Optometry.

How do we integrate Local-Focal Syntonic Optometry in a Behavioral Optometric Office?

We will cover aspects of basic observations and evaluations of patients with different Vision disorders.

This will lead to treatment plans looking at how the patient can recover visual processing as related to the overall rehabilitative process. Case examples and demonstrations will be used to make this a clinically driven lecture.

Equipment will be provided for use during the workshop portion of the seminar.

Please bring along for the workshop your: Retinoscope

Stefan Collier

He is a leader in bringing Behavioral / Functional Optometry and Syntonics to Europe. Stefan's knowledge, and willingness

to share, has allowed him to have several awards bestowed upon him over the years.

- 2002 & 2004 The Armand Bastien Award from Optometric extension Program Foundation (OEPF)
- 2010 The Skeffington-Alexander International Award from OEPF
