

WhereDat: Productivity for the 21st century

All your content, accessible from one place.

BUSINESS CHALLENGE

Knowledge workers spend an average of 8 hours a week searching for information. Finding information on the web is simple, any employee can hop onto Google, perform a web search and have results within a few seconds.

However, trying to find specific information inside a business system is more difficult. The data is spread across dozens of repositories ranging from customer support software, to data storage, e-mails, work collaboration tools and more.

It's common for employees to spend over an hour a day trying to hunt down the information they need. Those lost hours in productivity can add up to millions of dollars a year for large companies.

In order to tackle the problem, employees need a search solution that searches inside all of the company's apps simultaneously.

THE SOLUTION

WhereDat connects to your business tools and searches them simultaneously.

KEY BENEFITS

- Search as a platform - WhereDat integrates with the tools you already use.
- Secure - WhereDat is more secure than other search solutions because we don't index any of your company's data. Everything is negotiated between your employees device and your SaaS provider.
- SaaS - WhereDat is delivered as a service, making it easy to implement.
