

Hosted Virtual Desktops from prototype:IT offers several benefits. These include cost savings and an increase in control, security, agility, and productivity.

How pt:CENTRAL from prototype:IT works

Prototype:IT central desktops are run from a private data center. Employees or contractors can login from a laptop, desktop, iPad, Surface Pro, or Android device and have access to the same workspace regardless of what device they are using from anywhere in the world. Prototype:IT provides a consistent look and feel for the users to access company share drives, browse the internet at high-speeds, access Office 2016 office suite with Exchange mail from a desktop that looks and functions just as their normal desktop would. It also includes company applications access, virus protection, failover, and user data backups to provide everything that a company would need to run their business.

What's included in pt:CENTRAL from prototype:IT subscription

- Server Infrastructure
