

Energy Savings: 27%

Administered by: Global Real Estate Management Company

Bank – AC for 55 Sites

A top-ten global retail bank installed 488 COOLNOMIX[®] devices across in five countries on a variety of air-conditioning systems including DX, ducted, split-type, VRV, VRF and computer room air conditioning (CRAC) units. Company technicians installed COOLNOMIX[®] themselves due to the simplicity of installation. The devices were installed at fifty-five retail banks to reduce kWh consumption and greenhouse gas (GHG) emissions. The report below is for the twenty-six sites that were monitored for energy savings.

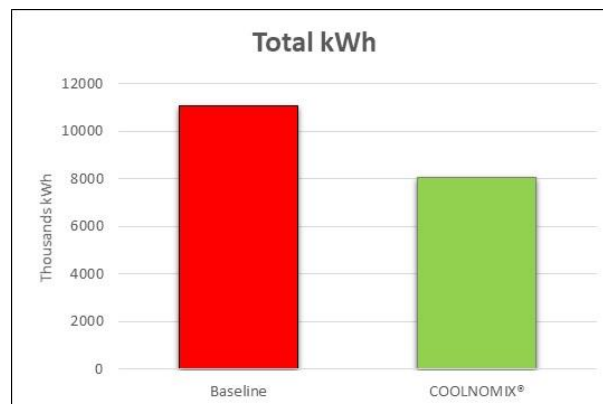

Installations	Baseline	COOLNOMIX [®]	Energy Saved	
488 AC Units	11,083,255 kWh	8,066,239 kWh	3,017,016 kWh	27%

Conclusion

COOLNOMIX[®] provided unrivalled AC energy savings on a variety of air conditioning systems at a very affordable price. The greatest financial savings was on CRAC systems due to high power consumption and year- round cooling demand. Self-installation reduced installation costs. COOLNOMIX[®] will continue to be installed in additional banks in 2017 and 2018. The expected rollout is about 16,000 units.
