MYRBÆRHOLMEN FISHING BRIDGES AND PARKING AREA

Location: Averøy, Møre og Romsdal
Built: 2010
Client: The National Tourist Route
Cost: Nkr 11,0M
Consultant: Norconsult AS

The site is a very good fishing spot and people fishing from the road represented a safety problem. The project provides secure ground for both fishers and tourist enjoying the view over the Atlantic Ocean.

The geometry of the new walkways emphasizes the curvature of the Atlantic road that meanders between the islets of the rough coast. A cut in the rock provide parking space for both locals and tourists trying their luck with the fish. Ramps, stairs, walkways and waiting area are prefabricated in galvanized steel and mounted on the existing bridge structure. The railings of the bridge were designed to improve fishing for the disabled.
