

iOS MANAGEMENT & DEPLOYMENT

Businesses of any size need flexible deployment options when choosing an Enterprise Mobility Management (EMM) platform. There are many factors in selecting an EMM include industry regulations, security goals and resources you need over your IT environment.

CRTG is proud to offer Enterprise Mobility Management and deployment services to customers in industries and businesses of all sizes. Through CRTG offerings, we are able to assist organizations with targeted solutions for their mobile strategies, deployment projects and ongoing managed services.

For times when development calls for new technology services, our engineers can create solutions for full management of the devices in your business. A mobile device management (MDM) server lets you configure devices to set up resources, settings and other group requirements. Your IT staff will be trained on the technology and setup for a high-level of security, based on best practices.

Mobility Device Management Offerings:

- **Full Scale Integration** - Single or hybrid models across your business. CRTG's engineers will ensure that characteristic hazards associated with BYOD are mitigated before full implementation.
- **Device control** - Back-up and restore, lock down devices, remotely wipe and provide configuration and settings updates, and advance troubleshooting. CRTG can quickly address security threats.
- **Manage mobile assets** - Track and manage devices as they enter your mobile environment, move across divisions and ensure that they are properly tracked and inventoried when retired.
- **Data Protection and security** - Adhere to corporate security policies and procedures. Mobile standards are maintained and compliance is met with industry requirements and regulations.
- **Advanced Reporting** - Access to view real-time information and ongoing customized reporting to improve and develop planning and budgeting.
