Move towards zero exposure of workers to toxic chemicals in the electronics manufacturing process.

**Working Goal**

**Why Process Chemicals?**

- ~18 million workers in global supply chain potentially using process chemicals
- Complex and deep supply chain
- Brands have been more focused on product chemicals, and are now starting to work on process chemicals
- Challenging for suppliers to have expertise and access to safer alternatives
- Suppliers often do not have training on exposure risks and focus more on production quotas
- Opportunity for companies to collaborate on a challenging supply chain issue
