

LYON PLACE AT CLARENDON CENTER

KLINE ENGINEERING
& CONSULTING

Project Description

Clarendon Center is a mixed-used development that encompasses nearly two city blocks in Arlington County, VA. The development includes two office buildings, a nine-story and a six-story office buildings, one 12-story apartment building and ground floor retail.

Kline's primary objective was to provide slab edge coordination drawings for the two-block infill development at the Clarendon Metro station. The slab edge drawings were prepared by coordinating building envelope shop drawings with architectural and structural drawings.

Our team prepared the drawings from the 1st floor through the penthouse roof of 2 buildings (Clarendon Center North, Retail and Office, and Clarendon Center South Retail, Office, and Residential).

Arlington, VA
