

## Company Overview:

How often do you think about your roof? Probably never.

However, millions of families in slums and villages around the world think about their roof every single day, every single night and every single season of the year. These families are forced to live under hot, leaky, broken metal sheets.

ReMaterials is the only company worldwide that is solving this global roofing situation.

ReMaterials is an early-stage startup that designs, manufactures, sells and installs roofing systems for families in slums and villages. Our roofing product is strong, insulating, waterproof and aesthetically pleasing. It is the only product in the world that solves a very large and severe roofing problem.

## Job description:

After 2 years of research and successful fundraising, we are now aggressively expanding team and manufacturing to serve our overwhelming sales response. We are thus moving from a 10 roofs/month to a 100 roofs/month factory. Your role will be to gain in-depth knowledge of our material and manufacturing process through experiments, determine the new, automated machines that we will be using in the next factory and develop suppliers.

We thus need someone with:

- Strong technical skills
- Deep knowledge of various manufacturing processes as well as the curiosity to learn more about our specific process requirements through relevant experiments
- Ability to coordinate with machine suppliers
- Experience in related industries like plywood, paper, particle and composite board is beneficial, as well as experience in mass production and automation
- A lot of excitement to help set up a brandnew factory for our one-of-its kind product innovation

You will be guided and supported by the founding team to be effective in this role.

The candidate is expected to have a good learning appetite and the potential to grow professionally in the organization.

There is a huge demand for better roofing, which is limited only by our effort and imagination. Our roofing solution is a one-of-its-kind product in the whole world, and superior to the other roofing options in the market – you will be proud to set up the first big manufacturing unit that produces it.

If you want to join a passionate team and a mission-oriented company, contact us now!
