

We took the high headroom, rock heavy tone of Planet B, our flagship bass overdrive and added extra flexibility for studio or stage use. A second channel with separate gain and volume controls and an "ignition" toggle switch for even more drive will give you massive clean to legendary mean tones. An internal circuitry provides 18V DC from a standard 9V DC power supply to ensure maximum headroom.

Controls:

**Gain:** gain setting for the "standard" channel, provides a wide range of sounds, from big bold clean to heavy overdrive that retains clarity even at maximum settings.

**Gain +:** gain setting for the "plus" channel, use along the "ignition" toggle switch for wider gain range.

**Blend:** mix the clean signal and preserve all of your precious low frequencies. Goes from all the way dry (counter clock-wise) to full-tilt.

**Tone:** Control your presentation in the mix. Rotate clockwise for brighter sound. Affects the overdriven signal of both channels.

**Volume:** set the output/master volume for "standard" channel (post blend).

**Volume +:** set the output/master volume for "plus" channel (post blend).

**Ignition Toggle switch:** extra gain boost (up position) on "plus" channel

**Supersonic toggle switch:** boost mid frequencies on both channels (up position) to make sure you'll be heard light years away.

**Bypass Footswitch:** True Bypass your effect

**More Footswitch:** Engage the "plus" channel

Built with the highest quality components available, operates with external 9 DC filtered/regulated power supply (- center, + ring). Max current consumption 76mA @ 9V DC.

Using a power supply of +12V DC or more may cause severe damage to the pedal and void warranty.

**Warranty:** Planet B Plus comes with 5 years warranty. We will provide service/repair at no cost for all internal parts, within 5 years from date of manufacture - buyer pays from/to shipping. This warranty excludes damages done due to misuse or improper handling.
