Our default color space is Adobe RGB. All files will be scanned at 5418DPI native resolution (unless otherwise specified). For Large Format we will scan up to a 2GB file size but can stitch to make a bigger file. Everything is saved as a 16bit tiff.

Please put the image frame number and/or description off the frame in the description field below.

Files can be sent either through a file sharing site of your choice (where available) or copied to a flash or hard drive. We can provide a flash drive if needed for an additional charge.

Title/Description/Frame Number	Film Format	Quantity	Price

INFO:

All scans are checked for sharpness but no unsharp masking is done unless requested. We scan to a linear 16 bit tiff file and then do a conversion in Colorperfect.

NEGATIVE FILM:

Negative film is scanned and converted to a positive state using Colorperfect and the film stock selected (unless otherwise requested). Approximate density, black and white points are set. No further post-scan cleanup or color/tonal correction is included. Black and white films are either left in RGB or grayscale as requested.

TRANSPARENCY FILM:

Approximate density, color balance, black and white points are set using Colorperfect. No further post-scan cleanup or color/tonal correction is included.

RETOUCHING/FILE MASTERING:

Although most scratches and some dust is removed from the transparency through the wet mounting process, there may be some inherent in the scan. We can perform further retouching to fully spot and color correct your files for an additional fee if needed.

DELIVERY:

Free Pickup

Ship Via USPS

Ship Via Fedex

PAYMENT:

We accept Paypal, Cash, Check or Money Order. Please send paypal payments to daniel@silverchroma.com
All shipping charges are additional and will be added to your total.
