

## TRIMBLE VISION BUNDLE PROGRAMS

Trimble VISION™ uses integrated cameras in S-series and VX instruments to capture metric imaging so that you can take survey measurements back in the office. If it's in the image, you can measure it. Capture images along with your points, lines, polygons and scans in the field. From the comfort and safety of your office make additional measurement of the job site using Trimble Business Center office software. This adds improved capability to the workhorse reliability of the Trimble S6, S8 and VX instruments. The imaging capability of VISION allows data collection of environments that cannot be easily captured by either conventional total stations or 3D laser scanners such as glass buildings or complex architecture. Trimble VISION allows you to capture more data in the field and prepare additional deliverables such as panorama street views overlaid with survey data in the office.

## **BUNDLE SPECIFICATIONS**

### **Trimble VX Spatial Imaging Solution Bundles**

Show your customers the only solution that combines the precision of traditional single point surveying with the visualization of images and the detail of 3D point cloud data.

This program allows customers to experience Trimble's most advanced terrestrial measurement solution by purchasing a Trimble VX Spatial Imaging system including:

- Trimble VX Instrument
- Trimble TSC3 Controller
- MT1000 Multitrack Prism
- Trimble Business Center Advanced software

Or

- Trimble VX Instrument
- Trimble TSC3 Controller
- Trimble Business Center Advanced software
- Trimble RealWorks Base software
