

Haiti Missions

Recommended Immunizations

The CDC [Center for Disease Control] strongly recommends the following immunizations before traveling to Haiti:

- DTAP [Diphtheria-pertussis-tetanus] within 5 years. If you've had a Td [tetanus] booster as an adult, you still need a Dtap booster [even in the states, a pertussis booster is recommended]
- Hepatitis A and Hepatitis B [required if working on a medical team]
- Typhoid [oral dosage is effective for 5 years, injectable dose is effective for 2 years]
- Current Flu vaccine if traveling during the winter months.
- Cipro is also recommended to take with you as well.
