Who We Are

V&A Consulting Engineers, Inc. (V&A) is a firm with a reputation and long-established history providing responsive service and successful solutions specialized in corrosion engineering. Headquartered in Oakland, CA and founded by José Villalobos, PE in May of 1979, V&A has since evolved into a multi-disciplined engineering organization concentrating on civil infrastructure. We now employ 41 team members in four offices located in Oakland and San Diego, CA, Houston, TX, and Las Vegas, NV.

What We Do

We are passionate about what we do... from field verifying pipe condition to assessing true remaining life of treatment plants, structures, and facilities. We bring absolute value to anyone responsible for taking care of and protecting America's infrastructure systems in water, wastewater, and light rail transit.

We assess resiliency and sustainability by providing methodically-collected data by

1. field verifying what actually exists and true replacement cost(s);
2. measuring and documenting condition; and
3. providing supportive data and then advising how best to maximize value...

so informed decisions can be made regarding operations, maintenance, and asset management.

V&A services municipalities, special districts, counties, and private agencies. We team with design consultants and municipal clients on projects such as evaluation and condition assessment of tanks, utilities, and water treatment plants; design of galvanic and impressed current cathodic protection systems for tanks, pipelines and water treatment plants; coating systems

recommendations and evaluation; field testing cathodic protection systems; corrosion failure analysis; materials selection; and more. Our team of dedicated and experienced engineers are committed to doing the job right, on schedule, and within budget.

Service Lines

-  Corrosion Engineering
-  Condition Assessment
-  Coating Systems Management
-  Flow Monitoring
-  Odor Control
-  Asset Management
-  AC Interference Mitigation
