

Great aesthetics designed for the rigors of the Fitness Center.

### Description:

There's no question that carpeting is the most versatile flooring material available. Its flexibility allows you to create patterns, borders, curves and even logos. The problem with traditional carpet is that it doesn't perform well in a fitness area. That's because most carpet is made of woven fabric that absorbs everything from perspiration, to spills, to grease from your CV machines. It also allows small fibers to get into the gears of your expensive machines, which causes extra strain on the motors and working parts, leading to more maintenance and shorter lives of this equipment.

However, if you could create a carpet that does not utilize these absorbent fibers, then you'd have a material that holds up to the rigors of fitness center use and allows you the design flexibility that comes with carpet. That's just what we've done in producing CarpeTile Sport, utilizing a 100% polypropylene fiber that's warranted for seven full years

### Applications:

- Cardio Rooms
- Locker rooms
- Retail Sales Floor
- Offices and hallways
- Entranceways
- Reception area
- Child Care Facilities
- Pro Shops
- Ramps
- Play Areas
- Fitness Facilities
- Spin rooms

**Colors:**

**Specifications**

**Construction**  
Non-woven diagonal ribbed carpet tile

**Pile Fiber**  
100% solution dyed polypropylene

**Face Weight**  
36 ounces per square yard

**Total Tile weight**  
132 ounces per square yard

**Total Tile Height**  
3/8"

**Backing**  
Bitumen

**Tile Size**  
19.69" X 19.69" (20 tiles per box)

**Wear Warranty**  
7 years

**Electrostatic Propensity**  
Permanently Anti-Static
