

SCIENCE VIDEO PRODUCTION

Making a really cool video is easy to do if you have an iPad or a little help from Mum or Dad and their smartphone. We'd love to see some great Science videos about topics that you are passionate about. Make sure your video:

- has YOU speaking on it. We want to hear what you have to say!
- is no longer than FOUR minutes
- is presented professionally (no shaky cameras, titles where needed)
- has the camera being held the correct way (landscape mode NOT PORTRAIT mode)

Videos can be presented at the Expo on an iPad. Speak to your teacher about what will work best. Here are some ideas to get you started:

Create a *David Attenborough* style video about your pets.

Create a movie trailer for your own science-fiction movie

Act as a chemist in a Science lab, finding a cure for a disease

Film a 'how-to' video explaining how to plant vegetables in your backyard

Video your family and friends about their opinions on rubbish and what we could do about it
