

# INVENTIONS

Where would we be without the great inventors of the world? Think about inventions like the lightbulb, the motor car and the internet. Our lives wouldn't be the same without them. What will be the next great invention of our time? Perhaps YOU may have a great idea for something we've never seen before!

Your presentation should include:

- A working model of your invention. If you can't make the real thing, then a model of the invention is the next best thing.
- A design brief - a written report on how you made it.
- A labelled diagram of your invention, making sure to mention what problem it will solve. List the materials you used and explain how it works.

Keep your invention neat and simple. Don't overcomplicate it. Below are some ideas for inventions, perhaps you've got one of your own!
