Harley Farms Difference!**

OUR MISSION

At Harley Farms, we will produce livestock and crops that align with the surrounding natural environment and have a special focus on animal and bird welfare. As a result, our customers can be confident that Harley Farm's products are fully traceable and from livestock which are humanely and sustainably raised.

SUSTAINABLE

We believe in maximizing the use of our farm land and forage crops, allowing the animals to live on the plants and crops they are meant to consume. We rotate our animals over our 1,200 acres of GMO-free crops and pastures, while our farm naturally replenishes itself through a seven year farm cycle.

HUMANLY RAISED

Our farming system is grounded in the belief that our animals should have the best life, raised as humanely and naturally as possible. As a result, our farm animals are kept together in family groups for most of their lives, reducing their stress levels and supporting their overall health.

Farms Difference!**

FREE RANGE

We strive to provide our animals with as much fresh air and abundant space to roam as possible, preferring to shelter rather than confine them. Even on the coldest, snowiest days, our pigs seem happiest outside as long as they have a dry and warm shelter at the end of the day.
