RosettaHealth™ CommunityCONNECT is the simple, affordable, one-stop solution for clinical information sharing in a community. All sites of care can easily and confidentially share information — from hospitals and ambulatory practices to post-acute care facilities and home health. It doesn't matter what systems you have in place, the whole community will connect seamlessly.

Connect Everywhere There's Care

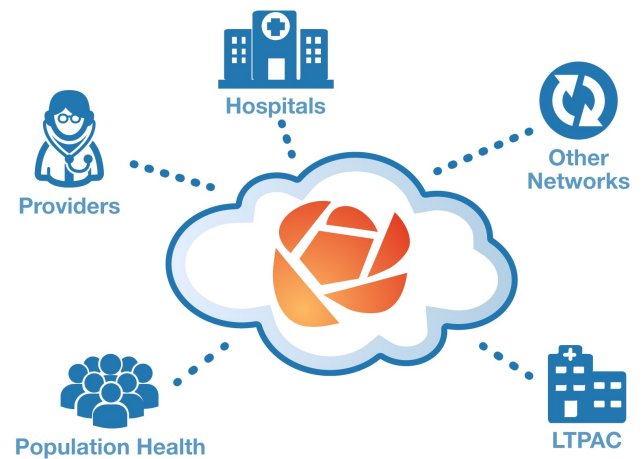

Wherever care is provided, CommunityCONNECT allows access to patient records — hospital, ambulatory practices, post-acute, home health and telehealth.

Real Clinical Integration

Provides needed information integrated into your existing systems, or via web: patient record access, referrals, secure messaging, labs and population health.

Sensible Pricing

Yes, you can have HIE capabilities at an economical community price. Fully-accredited SaaS platform allows for economies of scale with fast and simple rollout.

Feature	CommunityCONNECT	EHR Platform	Interoperability Platform
Cost-effective solution for communities	●	○	○
Population Health Analytics	●	◐	○
Works across all existing systems	●	○	◐
Quick Setup Time	●	○	○
Easily allows access to other trust networks: HIE, CommonWell, eHealthExchange, DirectTrust, etc.	●	◐	◐

Connectivity for the Community

Connect Everywhere – Cloud-based “universal bus” for health information

Leveraging current and emerging standards to move clinical data in and out of **any EHR in the land** — with a common interface bus. This opens up a world of possibility to hospitals, urgent and post-acute care systems, and ambulatory practices, including:

- Access patient records from everywhere, no matter the care setting,
- Easily share clinical information with any system in any community,
- You won't have to use a new tool — just enable your existing systems.

Health Messaging at your Fingertips – The most capable, easy-to-use health messaging system

Send secure, encrypted messages to any member of the care team, providing the means to safely and securely move HIPAA-covered medical records as well as simple messages.

Specific examples include:

- Refer patients with full medical record access,
- Message other facilities about patients,
- Send secure messages to provider mobile devices.

Powerful Analytics

Population Health – The power of analytics now available at the community

Population Health efforts have traditionally been expensive, time-consuming efforts that are out of the reach of many small communities. RosettaHealth's combination of SaaS “HealthBus” and in partnership with population health vendors, brings the power of health analytics to any community:

- Be able to see, and coordinate care across the community better,
- Reduce the occurrences of costly ED visits and hospitalizations,
- Enable care coordinators to drive preventive care.

Include All Care

All Care Settings – Small practices, post-acute facilities, and home health all have access

Facilities and setting without EHRs don't have to be left out of communicating care. With easy and intuitive portal access and mobile clients, all members of the community are connected:

- All facilities have access to patient records,
- Home health and mobile health providers stay connected,
- Full community connectivity allows for easy care coordination and implementation of population health

A Revolution in Health Integrations

1,000,000+

Health records moved per month

ANY Connection

EHRs, HIEs, mHealth, Post-Acute
