

Washing your tattoo:

1. Wash your hands, remove any rings or jewelry on your hands, and expose the tattoo (remove clothing).
2. Using luke-warm to warm water and a soft fragrance free soap, create a good lather of soap in your hands.
3. Apply the soap very gently to the tattoo and make sure to remove any dried fluids or blood and any remaining ointment.
4. Rinse the tattoo with luke-warm to cool water and remove all soap residues.
5. Gently pat dry with a lint-free towel or allow to air dry.

Applying ointment to your tattoo:

1. Once your tattoo is washed and dry you will want to apply a thin layer of artist recommended ointment (Aquaphor, A&D, ect.) Please check to make sure you don't have any allergies to chosen ointments.
2. Make sure the entire tattoo gets a VERY thin layer of ointment. When using lotions, rub in until completely absorbed. If too much ointment is applied then remove excess with a dry paper towel.
3. Apply ointment to the tattoo anytime it becomes dry or has been washed.
