DURAHOOF

Just add water!

DuraHoof is the easy-to-use footbath concentrate that helps you reduce copper and costs. There's no need for measuring "dry copper sulfate." Just add DuraHoof's pre-mixed solution to water, and begin cutting your copper sulfate usage and lower the cost of your footbath program.

DuraHoof includes penetrating cleaning agents which enable copper to work right where it's needed most, even in the presence of organic matter. Compared to copper sulfate alone, DuraHoof has just the right amount of HoofMax in the solution to enable more successful cow passes for a more cost-effective footbath.

DuraHoof ensures proper Copper (Cu) chemistry for the duration of your footbath, allowing for more successful cow passes with less copper compared to using copper sulfate alone.
