

Why add a touch of Copper?

HealMax and copper sulfate are two important components for optimum dairy hoof care.

- *HealMax is a topical antiseptic that replaces formaldehyde in the footbath to quickly target problems such as digital dermatitis (hairy heel warts).*
- *Copper sulfate is an antibacterial agent that promotes hoof hardness and effectively targets the pathogens that cause hoof rot.*

HealMax Cu+ Footbath delivers fast, effective results without formaldehyde and with a very efficient amount of copper.

HOOF HEALTH SOLUTIONS

HealMax™ Cu+

The results you trust, with just the right amount of copper

HealMax Cu+ Footbath Concentrate is an all-in-one solution that provides all the benefits of HealMax with just enough copper to give you the results you need — quickly and conveniently!

- **Easy to mix** and use. Just add to water!
- **Get cows back on track fast** with visible results starting in one week or less
- **Remains effective** in both hot and cold weather
- **Safer than formaldehyde** for humans and animals
- **Less costly** than traditional copper sulfate footbaths

HealMax™ Cu+ is ideal for:

- Dairy operations looking to use the minimal amount of copper in their footbaths
- Producers in areas where on-farm formaldehyde use is banned
- Dairy producers who want a safer footbath
- Operations seeking a streamlined footbath procedure
