**CMS Accountable Health Communities Model
selects Nevada Primary Care Association among
32 participants to serve as local ‘hubs’ linking clinical and community services**

Last year, the Centers for Medicare & Medicaid Services (CMS) released a Funding Opportunity Announcement (FOA) for applications for the Center for Medicare and Medicaid Innovation’s (Innovation Center) Accountable Health Communities (AHC) Model. Over a five-year period, CMS will implement and test the three-track AHC model to support local communities in addressing the health-related social needs of Medicare and Medicaid beneficiaries by bridging the gap between clinical and community service providers. Social needs include housing instability, food insecurity, utility needs, interpersonal violence and transportation.

Today, CMS has announced that it has selected Nevada Primary Care Association as one of 32 participants for the Assistance and Alignment Tracks of the AHC model. By addressing critical drivers of poor health and high health care costs, the model aims to reduce avoidable health care utilization, impact the cost of health care, and improve health and quality of care for Medicare and Medicaid beneficiaries. The organizations in the AHC Assistance Track will provide person-centered community service navigation services to assist high-risk beneficiaries with accessing needed services. The organizations in the AHC Alignment Track will also provide community service navigation services, as well as encourage community-level partner alignment to ensure that necessary services and supports are available and responsive to the beneficiaries’ needs.

“We know that innovation at the state and community level is essential to improve health outcomes and lower costs. In this model, we will support community-based innovation to deliver local solutions that address a broader array of health-related needs of people across the country,” said Dr. Patrick Conway, CMS Deputy Administrator for Innovation & Quality. “As a practicing pediatrician, I know the power of a model like this to help address health and social support needs of our beneficiaries, and their families and caregivers.”

CMS received applications for the Assistance and Alignment Tracks from a variety of organizations across the country. After an extensive review process, 12 Assistance Track and 20 Alignment Track bridge organizations representing rural and urban communities across 193

counties in 23 states were chosen to participate in the model. The 32 bridge organizations in the AHC model are diverse —varying in type (e.g., county governments, hospitals, universities, and health departments), size, location, and beneficiary demographics.

The Assistance and Alignment Tracks of the Accountable Health Communities Model will begin on May 1, 2017 with a five-year performance period.

To view a list of the Assistance and Alignment Tracks bridge organizations in the Accountable Health Communities Model, please visit: <https://innovation.cms.gov/initiatives/ahcm>

The Accountable Health Communities Model is authorized under Section 1115A of the Social Security Act, which established the Innovation Center to test innovative payment and service delivery models to reduce Medicare, Medicaid, and Children’s Health Insurance Program expenditures while maintaining or enhancing the quality of beneficiaries’ care.

For more information about the Accountable Health Communities Model, please visit: <https://innovation.cms.gov/initiatives/ahcm>.

**CMS Accountable Health Communities Model
selects Delta Health Alliance, Inc. among
32 participants to serve as local ‘hubs’ linking clinical and community services**

Last year, the Centers for Medicare & Medicaid Services (CMS) released a Funding Opportunity Announcement (FOA) for applications for the Center for Medicare and Medicaid Innovation’s (Innovation Center) Accountable Health Communities (AHC) Model. Over a five-year period, CMS will implement and test the three-track AHC model to support local communities in addressing the health-related social needs of Medicare and Medicaid beneficiaries by bridging the gap between clinical and community service providers. Social needs include housing instability, food insecurity, utility needs, interpersonal violence and transportation.

Today, CMS has announced that it has selected Delta Health Alliance, Inc. in Mississippi as one of 32 participants for the Assistance and Alignment Tracks of the AHC model. By addressing critical drivers of poor health and high health care costs, the model aims to reduce avoidable health care utilization, impact the cost of health care, and improve health and quality of care for Medicare and Medicaid beneficiaries. The organizations in the AHC Assistance Track will provide person-centered community service navigation services to assist high-risk beneficiaries with accessing needed services. The organizations in the AHC Alignment Track will also provide community service navigation services, as well as encourage community-level partner alignment to ensure that necessary services and supports are available and responsive to the beneficiaries’ needs.

“We know that innovation at the state and community level is essential to improve health outcomes and lower costs. In this model, we will support community-based innovation to deliver local solutions that address a broader array of health-related needs of people across the country,” said Dr. Patrick Conway, CMS Deputy Administrator for Innovation & Quality. “As a practicing pediatrician, I know the power of a model like this to help address health and social support needs of our beneficiaries, and their families and caregivers.”

CMS received applications for the Assistance and Alignment Tracks from a variety of organizations across the country. After an extensive review process, 12 Assistance Track and 20

Alignment Track bridge organizations representing rural and urban communities across 193 counties in 23 states were chosen to participate in the model. The 32 bridge organizations in the AHC model are diverse —varying in type (e.g., county governments, hospitals, universities, and health departments), size, location, and beneficiary demographics.

The Assistance and Alignment Tracks of the Accountable Health Communities Model will begin on May 1, 2017 with a five-year performance period.

Social needs include housing instability, food insecurity, utility needs, interpersonal violence and transportation.

Today, CMS has announced that it has selected Care New England Health System in Rhode Island as one of 32 participants for the Assistance and Alignment Tracks of the AHC model. By addressing critical drivers of poor health and high health care costs, the model aims to reduce avoidable health care utilization, impact the cost of health care, and improve health and quality of care for Medicare and Medicaid beneficiaries. The organizations in the AHC Assistance Track will provide person-centered community service navigation services to assist high-risk beneficiaries with accessing needed services. The organizations in the AHC Alignment Track will also provide community service navigation services, as well as encourage community-level partner alignment to ensure that necessary services and supports are available and responsive to the beneficiaries’ needs.

“We know that innovation at the state and community level is essential to improve health outcomes and lower costs. In this model, we will support community-based innovation to deliver local solutions that address a broader array of health-related needs of people across the country,” said Dr. Patrick Conway, CMS Deputy Administrator for Innovation & Quality. “As a practicing pediatrician, I know the power of a model like this to help address health and social support needs of our beneficiaries, and their families and caregivers.”

CMS received applications for the Assistance and Alignment Tracks from a variety of organizations across the country. After an extensive review process, 12 Assistance Track and 20

Alignment Track bridge organizations representing rural and urban communities across 193 counties in 23 states were chosen to participate in the model. The 32 bridge organizations in the AHC model are diverse —varying in type (e.g., county governments, hospitals, universities, and health departments), size, location, and beneficiary demographics.

The Assistance and Alignment Tracks of the Accountable Health Communities Model will begin on May 1, 2017 with a five-year performance period.

**CMS Accountable Health Communities Model
selects Mountain States Health Alliance among
32 participants to serve as local ‘hubs’ linking clinical and community services**

Last year, the Centers for Medicare & Medicaid Services (CMS) released a Funding Opportunity Announcement (FOA) for applications for the Center for Medicare and Medicaid Innovation’s (Innovation Center) Accountable Health Communities (AHC) Model. Over a five-year period, CMS will implement and test the three-track AHC model to support local communities in addressing the health-related social needs of Medicare and Medicaid beneficiaries by bridging the gap between clinical and community service providers. Social needs include housing instability, food insecurity, utility needs, interpersonal violence and transportation.

Today, CMS has announced that it has selected Mountain States Health Alliance in Tennessee as one of 32 participants for the Assistance and Alignment Tracks of the AHC model. By addressing critical drivers of poor health and high health care costs, the model aims to reduce avoidable health care utilization, impact the cost of health care, and improve health and quality of care for Medicare and Medicaid beneficiaries. The organizations in the AHC Assistance Track will provide person-centered community service navigation services to assist high-risk beneficiaries with accessing needed services. The organizations in the AHC Alignment Track will also provide community service navigation services, as well as encourage community-level partner alignment to ensure that necessary services and supports are available and responsive to the beneficiaries’ needs.

“We know that innovation at the state and community level is essential to improve health outcomes and lower costs. In this model, we will support community-based innovation to deliver local solutions that address a broader array of health-related needs of people across the country,” said Dr. Patrick Conway, CMS Deputy Administrator for Innovation & Quality. “As a practicing pediatrician, I know the power of a model like this to help address health and social support needs of our beneficiaries, and their families and caregivers.”
