

Forget Screenshots

Resolve issues faster with screen recordings

Create and share screen recordings easily

HYFY lets users record their screen and voice to create better bug reports, reproduction steps, and demos. Capture video of a browser tab, full screen, or any window, then share recordings into any JIRA issue or HipChat room with ease.

Improve communication, better than screenshots

Start recording right from any JIRA/Service Desk issue or attach from a library of reusable videos into a HipChat room. Each recording includes high resolution video along with voice and mouse movement, replacing dozens of screenshots.

Faster time to resolution

HYFY screen recordings are a better way to illustrate bugs, communicate requests, or demonstrate reproduction cases. Videos capture debugging information that helps teams diagnose and resolve with less back and forth.

Save time and accomplish more with video capture

Record your screen and voice.

HYFY lets you capture a browser tab, any window or your entire screen along with your voice and mouse cursor. Each high-resolution screen recording replaces dozens of screenshots.

Designed for teams that use Atlassian.

Share directly to HipChat and JIRA with HYFY's built-in integrations or paste links into any tools. Any team member on any platform can view a HYFY video with nothing to install.

Keep videos private.

Businesses need to keep sensitive information private. With HYFY, limit access to email domains, JIRA teams, or HipChat groups. You can even restrict viewing to a single email address.

One click. That's it.

Choices take time. With HYFY, there's no need to pick resolutions or codecs, or tweak a hundred different settings like other screen capture or screencasting tools.

Simple, easy sharing.

Stop dealing with storage and transfers and post-processing of giant video files. HYFY handles everything for you so that sharing is so easy, you'll want to do it all day long.

*No other tool lets us capture and share bug reports as fast.
HYFY is our team's new best friend!*
