

# EdTech Management Platform Preparedness Checklist

To prepare for organizing, streamlining and analyzing education technologies, it's best to determine what the highest priorities are:

- How are we choosing edtech products?
- How many edtech products are we using?
- Do we know which edtech tools are impacting student outcomes?
- Could we better aggregate our edtech product contracts?
- Do we have various individuals initiating or executing edtech product contracts?
- Are multiple contacts at our organization constantly getting disruptive sales calls?
- Do we have a consistent system for RFPs and RFIs?
- Do we have a means for gathering educator feedback on what's working in classrooms?
- Do we empower teachers to select effective products?
- Are we providing support for edtech products, or are educators doing discovery and procurement on their own or in a vacuum?
- Are we capturing product feedback and documenting usage to create institutional knowledge?
- Is there a way to share product feedback across our school, district and network?
- Do we compare our data with like or leading districts?
- Could we save budget by synchronizing our edtech purchases?
- Could we save time by managing all products in a centralized library?

LearnPlatform and the Lea(R)n Implementation Success team — all former educators, administrators, researchers and technologists — help you quickly simplify the process for all staff. Whether for a single school, a unique student population or an entire district, state or network, we can help you cost-effectively identify significant savings and focus dollars and staff on driving results for students.
