Portola Valley Elementary School District’s (PVSD) mission statement is clear:
To nurture each child’s academic, physical, social and emotional growth by
providing a comprehensive curriculum, high quality instruction and
personalized support in a collaborative environment that values diverse
perspectives and promotes equity. In a similar way, PVSD’s implementation
of LearnPlatform has followed a clear and efficient path.

Starting with the kickoff, PVSD worked to answer vital questions related
to edtech management:
• Are teachers sharing what they use with parents? Administrators? Peers?
• Are they critically evaluating their tools for student engagement and
privacy implications?

In partnership with LearnPlatform, PVSD created a systematic workflow of
evaluating, sharing and developing strategic pilots, focused on student and
teacher edtech use. By building a community of practice around selecting
the most appropriate application for the classroom, PVSD has created a
strong culture of strategic practices for improving teaching and learning.

Implementation was designed to introduce LearnPlatform to educators
and administrators in three chunks:
1. Creation of the PSVD product library with custom statuses to provide
teachers with context for product approvals and feedback on priority tools.
2. Implementation of individual teacher libraries to share with PVSD parents
and stakeholders.
3. Designation of teacher request workflow as PVSD process for all educators.

PVSD utilizes LearnPlatform as its system of record for contracts and
understanding of edtech access through Google Chrome Extensions,
which has identified **791 edtech products** since the start of the 2017-2018
school year.

"LearnPlatform has provided a streamlined approach to vet,
recommend, and create a custom library of productive and
instructional-based applications for the district and each teacher.
Our community is happier... we have a transparent approach to sharing
the technologies used in each classroom! LearnPlatform has provided
us peace of mind and a successful return on investment."

*Jason Borgen, Former Director of Learning and Innovation*
