

Securing Compliance by Developing and Implementing a Reporting Tool

New regulatory requirements puts pressure on engine manufacturers reporting on aftermarket engines. Fortos supported a world leading OEM in both developing and implementing a reporting procedure at 15 different production and warehouse sites in North America and Europe to secure that the new regulatory requirements were met.

Client Challenge

Recent years have seen authorities increase the requirements for engine manufacturers regarding their reporting on aftermarket engines. The client, a world leading automotive OEM, has a large network of sites, all whom operates differently with different system prerequisites and procedures for aftermarket engine follow-up.

Client Solution

To help meet the new regulatory requirements the client needed to implement a single tool to manage the reporting procedure. Fortos secured that a total analysis of the clients prerequisites was conducted at site level, to break down capabilities. Support was provided under the development of the tool to ensure that the tool would enable the client to become compliant in an efficient way.

The Fortos team lead the implementation of the tool at 15 different production and warehousing sites in both North America and in Europe. The roll out also included SOPs, training sessions and deployment of a continuous improvement governance structure.

Client Value

Fortos ensured that the client was able to set the right conditions to meet the regulatory demands, thus prevent the client to avoid risk of large fines, given the non-compliant state they found themselves in. The solution increased visualization and transparency of the parts flow managed by factories, warehouses, and engine return hubs. Other than securing compliancy, this provided the client with substantial value, as the client could get a clear and holistic view of the aftermarket engine follow-up. Furthermore, clear guidelines and documentation to maintain an exceptionally important but non-core process in site operation was put in place.

Client & Fortos Collaboration

The Fortos team and the client worked in close collaboration, utilizing each other's deep knowledge of the industry. The pragmatic approach taken was key for an successful project and allowed for a smooth transition once the project was finished.

By both being part in the development- and implementation phase, the Fortos team showed commitment to make change happen and delivered true value to the client.
