

essential FIRE SAFETY

IN CASE OF FIRE

If your clothes are on fire:
STOP, DROP AND ROLL.

Feel the temperature of the door from the inside with the **back of your hand.**

If the door is cool, open slowly and ensure fire and/or smoke is not blocking your escape route and close it behind you.

If the door is hot, do not open. Escape through a window. If you cannot escape, hang a white or light-colored sheet out the window, alerting fire fighters to your presence.

Keep low to the ground – smoke and heat rise. Call emergency services once you're safe.

WHAT YOU SHOULD KNOW

Do you have a smoke detector?

You should have one in your bedroom. A smoke detector should be installed in every room that will be occupied except the kitchen or above a fireplace where there will be false alarms.

Do not live above the 7th floor.

The fire service cannot rescue you with a ladder truck, and helicopter rescues are not possible for most buildings.

Plan two ways out of every room.

Think about how you will escape the room in case of fire – do you have a ladder/a rope and window access?

Watch your smoke.

Cigarettes are a leading cause of fire deaths – put your ashes out and don't smoke in bed!

65% of reported home fire deaths occur in homes with no smoke alarms or non-working smoke alarms.

Every year, thousands of people die in fires because they are not properly equipped and prepared.

FIRE SAFETY *in* BRAZIL

Fire safety regulations vary drastically across the world; be prepared to take initiative to ensure your safety

EMERGENCY NUMBER: 193

In the year 2000, approximately 1,700 people died from fire-related injuries in Brazil. That is over 10x more annual fire fatalities than many western European countries!

*Many buildings do not have smoke detectors, alarm systems, or evacuation procedures. It is **your responsibility** to make your home fire safe!*
