

MetalZorb® Disposal Considerations

MetalZorb is a non-toxic, bio-degradable, non-hazardous product prior to being used. This product does not contain materials that require special handling or pose any threat to human health or the environment.

Once the product is used as a stormwater filter, it will contain substances that it successfully removed from the filtered water. After the sponge has adsorbed the metal ions from the stormwater, the metal is bound to the sponge and will not be released without special chemical treatment. The metals are now in a solid waste form.

CleanWay Environmental Partners recommends that used sponge products be disposed of at an approved solid waste disposal facility. Disposal regulations vary greatly from state to state and even from one disposal facility to another.

If the sponge has been exposed to hazardous metals such as mercury or lead, an analysis may need to be performed. Consult your local waste disposal authority for details.

PRODUCT DISCLAIMER: This product is not for personal, family or household use. It is only intended for specified agricultural, business, commercial, or industrial purposes. Approved uses of this product can only be determined after consultation with qualified CleanWay Environmental Partners, Inc. personnel. This product shall be installed, repaired, and maintained only by persons trained to do so. Finally, disposal of this product must be made in an appropriate manner. CleanWay Environmental Partners is not responsible for disposal or testing of this product for hazardous content and will not be liable to any party for such disposal, testing, or content.
