Demolition of Empire Riverton Units 7, 8 and 9

KCOM is completing the decommissioning and demolition of Units 7, 8 and 9 at the Empire Riverton facility located in Riverton, KS. The contract valued at \$4.8 million involves the environmental decommissioning (asbestos abatement and universal waste) and dismantling of two coal fired power generating units 7 and 8, and one gas turbine unit 9 as well as auxiliary structures. KCOM is performing building separation, turbine generator removal, asset recovery and site restoration.

KCOM crews successfully demolished the auxiliary structures and prepping the two main boiler units, gas turbine and structures for implosion which was successfully completed in June of 2017. KCOM also demolished four water intake structures under an US Army Corp 404 permit.

KCOM is currently finalizing scrap preparation and shipment for recycling. Once all the scrap and concrete is removed, KCOM will begin site restoration which will include modifications to the main control room building a new steel stair tower and access platforms, new roof work and asphalt roadways around the site.
