## 2x Glass Bowls

The 2x Glass Bowls explore material extremes and push conventional boundaries in the realm of glass blowing.

To create the bowls, broken glass is incorporated into a glass bubble and through a repetitive process of heating, shaping, and molding, the once sharp shards of glass become blunt and sculpturally integrated into the form. Air is then inhaled through the blow-pipe creating a cavity. The bottom of the bowl is cut and polished just above the glass gather line—where the molten glass accumulates prior to being shaped—honoring both skill and process.

### Materials

Handblown Glass

### Dimensions

Lg (approx.) 12"W x 6"H

Sm (approx.) 6"W x 3"H

Each bowl is unique. Custom sizing and colors available.
