

Hieracium glomeratum

Yellow Devil Hawkweed

Asteraceae, the sunflower family

Category: **EDRR**

Diagnostic Characteristics

- Perennial; grows to 3 feet tall with leafless stems
- Leaves have short, stiff hairs on both sides
- Heads have dandelion-like yellow ray (strap-like) flowers
- Flower stalks are short and in compact flower clusters
- Milky latex is exuded when plant is cut or broken

Background

- Native to Europe
- Inhabits pastures, meadows, forest clearings, and disturbed areas
- Reproduces vegetatively by rhizomes, stolons, and wind borne seeds
- Highly successful in out-competing native plants
- Grazing increases infestation size
