# Dashboards

## Easy to read, single page, real-time user interface, showing a graphical presentation of the current status!

The term dashboard originates from an automobile dashboard where a driver can monitor major functions at a glance via the instrument cluster. Information dashboards show business metrics, letting the viewer see the health and state of their organisation, and are typically configured to show summaries, key trends, comparisons, and exceptions.

SharePoint dashboards provide rich features for business intelligence functionality, such as scorecards with key performance Indicators (KPIs) showing how actual performance compares to a goal, data grids, and charts to visualise data patterns. Sharepoint dashboards can also integrate with many other services to display information from various sources in a user friendly and graphically interactive way.

### PRODUCT BENEFITS

#### CUSTOMISABLE

Dashboards can be built in a way that will allow them to be custom focused per individual user needs.

#### DRILL INTO DETAILS

Display details behind the summary information if required but keep the detail from the standard view unless it is deemed necessary.

#### TRENDING VISIBILITY

Allows to make decisions and react to issues before they become problems.

#### CONSTANT DATA FLOW

Dashboards are driven off of current data in a real-time or near real-time structure that reflects the current data.

### SERVICES

With an experienced .Net development pool, Inov8 has pushed SharePoint in all directions to fulfill both product and client expectations.

SharePoint is one of the four key service offerings of Inov8.

We can provide the full range of software engineering services from analysis and design, through to development and testing.

### ANY QUESTIONS?

CONTACT US: [info@inov8.co.nz](mailto:info@inov8.co.nz)

### Key Elements

- Simple, communicates the message easily
- Minimum distractions in conveying the information
- Supports organized business with meaning and useful data
- Applies human visual perception to visual presentation of information
- 

### Integrations

- PerformancePoint Services (charts, scorecards, metrics)
- SQL Server Reporting Services (SSRS)
- Visio Services
- Excel Services
- SharePoint web parts
