

HIGH-PERFORMANCE BUILDING WEEK 2018

June 11 – 15, 2018

Standards – Important Tools for Innovative Infrastructure Solutions

As billions of dollars are invested to improve and maintain our built environment, technically robust standards that reflect the contributions of a wide range of interested experts contribute to the success of both public and privately funded projects. Please join us for an expert discussion focusing on how codes and standards play a significant role in supporting strong, practicable and resilient 21st century infrastructure solutions. These solutions include not only incorporating new technologies – such as 3D printing - into codes and standards, but also recognizing the value of hazard mitigation strategies in assuring that infrastructure and buildings are built to withstand future events. Building owners, designers and governments, rely on codes and standards to provide a consistent basis for assuring that mitigation measures achieve the desired level of protection.

Luncheon Briefing

Thursday, June 14, 2018 • 12:00 – 1:00 pm • 2226 Rayburn House Office Building

Welcome

Dain M. Hansen, Chair, High-Performance Buildings Coalition,
Senior Vice President, Government Affairs, The IAPMO Group

Representative David McKinley and Representative Peter Welch
Co-Chairs, High Performance Building Congressional Caucus

Presentations

Bryan Soukup, Executive Director, Alliance for National and Community Resilience

Ryan M. Colker, JD, Vice President, National Institute of Building Sciences

Dr. Clarissa Ferraris, the Group Leader of the Inorganic Materials Group
National Institute of Standards and Technology

Martina T. Driscoll, P.E., Wiss, Janney, Elstner Associates, Inc. behalf of ASTM International
