**What is the land use/land cover breakdown in your county?**

383,212 ACRES OF LAND AREA IN BALTIMORE COUNTY

- **44.2%** Tree Cover
  - 169,375 acres
- **19.8%** Agriculture
  - 75,854 acres
- **16%** Turf Grass (Lawns)
  - 61,247 acres
- **13.8%** Impervious (Buildings/Pavement)
  - 52,786 acres
- **5.1%** Other
  - 19,688 acres
- **1.1%** Non-Forested Wetlands
  - 4,262 acres

1. Tree cover includes all trees occurring on all land uses, such as individual trees found over turf, impervious, agricultural, wetlands, or other lands. It also includes areas of "forest," defined in this dataset as patches of tree cover 1 acre or greater, with a minimum patch width of 240 feet.
2. Other includes a mixture of non-treed land uses not captured in the main pie chart categories. See the Data Guide for detailed definitions of "other" and all the land use categories.

Land use/land cover statistics were generated based on 2018 imagery using the 2022 edition of the Chesapeake Bay Land Use and Land Cover Database.

---

**Where does tree cover occur in your county?**

- **67.4%** is in forest (114,092 acres)
- **22.9%** is over turf grass (38,823 acres)
- **7.2%** is other tree cover (12,209 acres)
- **2.5%** is over impervious (4,252 acres)

---

**What are some benefits of tree cover in your county?**

- **Total Air Pollution Removal Value**
  - 13.1 Million lbs removed annually
  - $23.8 Million saved annually
  - Total air pollution removal includes CO, NO\(_2\), O\(_3\), SO\(_2\), and Particulate Matter (PM2.5, PM10).
- **Gallons of Reduced Stormwater Runoff Value**
  - 1 billion gallons reduced annually
  - $9.3 million saved annually
- **Carbon Sequestered Value**
  - 222,000 tons removed annually
  - $41.6 million saved annually

Calculated based on 2018 tree cover data using landscape.itreetools.org.
How is tree cover changing on developed and developing lands?

Understanding how your tree cover changes over time can inform the sustainable management of forests and community trees. The map to the left shows where your county has lost and gained tree cover from 2013 to 2018, focusing on land that is already or newly developed.

Tree cover can be lost quickly due to human activities (e.g., construction) or natural events (e.g., severe weather).

Tree cover can be gradually increased through tree planting and natural regrowth, but these gains may take 10-15 years to be detected in high resolution imagery.

Since mature, healthy trees provide significantly greater community benefits than newly planted trees, it is important to both preserve existing tree cover and seek opportunities to grow new trees and forests. Local land use planning, ordinances, and tree programs play a critical role!

Tree Cover Change on developed/developing lands (2013–2018)

Gains (131 acres)
- 107 Acres gained over turf/pervious
- 24 Acres gained over impervious

Losses (1276 acres)
- 862 Acres lost to turf/pervious
- 414 Acres lost to impervious

Net Change = Gains – Losses
(-1,145 acres Net Loss)
