**DIGITAL THERMOMETER INSTRUCTION FOR USE**

Please read thoroughly before using

**DEVICE USAGE AND INTENDED USE**

This digital thermometer is intended to measure the human body temperature for women. Its precise digital display is for use in a household environment.

**HOW TO USE**

1. Saturate the probe with isopropyl (rubbing) alcohol before using.

2. Press and release the ON/OFF button, the display window will show “1812” confirming that the unit is working.

3. The ON/OFF button will show “L” if the room temperature is greater than 90°F, it will display “N” otherwise.

4. Place the probe in the appropriate position.

5. Once the degree sign “°” stops flashing, the measurement is finished and the temperature is displayed. An beep warning signal will also sound approximately 5 seconds after “°” stops flashing.

6. The unit will automatically turn off 30 seconds after temperature measurement is finished. In a backup battery-free life, it is a best to press the ON/OFF button to turn off since the temperature has been indicated.

**Special Features**

- **Memory Read**
  - The ON/OFF button is depressed to activate the thermometer, hold down for approximately 5 seconds. The display of 188.88 will change to show the last temperature. This reading is displayed as long as the button is held down. When the button is released, the reading will disappear. This button can be used to recall the last memory. 
  - (For Android mobile device) When the device is off, put mobile device above the thermometer, the last temperature will be read-back and show on mobile device.

- **NFC**
