

NATO Reporting Names for Chinese and Soviet Aircraft

From 1954 the Air Standards Co-ordinating Committee (ASCC) allocated code names to Chinese and Soviet aircraft. This was essential given the uncertainty in the West about the true designations. The scheme used words beginning B (Bomber), C (Transport), F (Fighter), H (Helicopter), M (Miscellaneous including trainers). For fixed-wing aircraft single syllable words were applied to prop-driven aircraft while two-syllable words were used for jet-engined types. Prior to 1954 NATO used the USAF type number system which ran from 1 to 40, but which offered less flexibility in describing variants. Where appropriate the type numbers are given.

The Reporting scheme appears to have ceased around 1990 after which Chinese, Russian or Ukrainian designations have been used. The above is not intended to be a complete list of Chinese or Soviet aircraft, merely those with reporting names. Later variants of types included above or types without a NATO reporting name have been excluded. Any changes or additions would be most welcome.

With thanks to Robert Beechy and 'TJ'.
