The U.S. Department of Energy (USDOE) is gathering your comments on its fiscal year 2024 Budget Request. USDOE is required to submit a compliant budget that keeps cleanup on track, but the budget changes as it goes up the chain of command to the President. Your comments can help put a spotlight on why it is important that the cleanup is fully funded, and communicate your cleanup priorities.

**WHAT?**

The U.S. Department of Energy (USDOE) is gathering your comments on its fiscal year 2024 Budget Request. USDOE is required to submit a compliant budget that keeps cleanup on track, but the budget changes as it goes up the chain of command to the President. Your comments can help put a spotlight on why it is important that the cleanup is fully funded, and communicate your cleanup priorities.

**BACKGROUND**

The Hanford Site budget process is complicated. There are always three fiscal years of budget in play at one time: the current year and the next two. So in 2022, the local USDOE site managers that run the Richland Operations and Office of River Protection are working on their budget requests for fiscal year 2024. Hanford's fiscal year goes from Oct. 1st to Sept. 30th.

Certain parts of the budget process are hidden from public view. Since 2013, more and more of the budget numbers have been embargoed so that you can't see them. This makes it really hard to provide meaningful comments on what the USDOE local field office is planning to request. The lack of information also means you can't see how the field offices are prioritizing cleanup to know what would "fall off the plate" if the cleanup was not fully funded.

Read on to see Hanford Challenge's concerns and sample comments.
In the past, the public, stakeholders, and regulators had a collaborative relationship with the USDOE field offices when it came time for budget submittals. It was well-known that for federal employees "the President's budget is our budget", even if they didn't like cuts that were made from their original submittal.

The WA State Dept. of Ecology, Environmental Protection Agency, and public were seen as allies in the work of advocating for a fully-funded cleanup that protected human and environmental health. THIS COLLABORATIVE SPIRIT IS GONE. USDOE conversations about the budget have turned defensive and closed, with no effort to share preliminary budget submittal numbers — all under the excuse that this information is embargoed until the President releases his budget request to Congress.

While we are disheartened with this lack of transparency, future leadership could turn us back to an era of collaboration to ensure that the case is made, loud and clear, from all fronts, that the cleanup must be fully funded in order to succeed. Until then, we will work towards this future.

In addition, we are concerned that USDOE isn't asking for the amount of money it truly needs to keep cleanup on track. For example, the projected cleanup cost for FY 2022 was between $3-5 billion, according to USDOE's own Hanford Lifecycle Scope, Schedule and Cost Report. However, for the FY 2022 budget request, USDOE only asked for $2.5 billion.

Year after year, USDOE asks for less money than what is actually needed to fund cleanup priorities. USDOE will never be able to fully fund cleanup and stay on track if it doesn't ask for the amount that is needed to do the work. We are concerned that cleanup will take longer and longer, and USDOE will look for shortcuts to save money and time. All because USDOE didn't ask for the money it knows it needs.
REQUEST A COMPLIANT CLEANUP BUDGET: Don't make cuts before they are made for you. Ask for the amount of money needed to fully fund cleanup. Requesting insufficient funding delays cleanup. Make the case for a fully-funded cleanup that meets legally mandated deadlines and ensures human and environmental protection. Request funding levels based on projections in the 2022 Lifecycle Scope, Schedule and Cost Report and use the report as leverage to advocate for the funding needed to stay on track.

Prioritize funding for:

- **Tank Waste Vitrification**: Make glass safely. Prioritize work on Direct Feed Low Activity Waste to immobilize tank waste in glass.
- **324 Building Cleanup**: Accelerate cleanup of B-cell contamination and make sure waste is characterized appropriately to keep long-lived radionuclides out of Hanford's onsite landfill, the Environmental Restoration Disposal Facility.
- **WESF Capsules to Dry Storage Sooner**: Safely get the Waste Encapsulation Storage Facility (WESF) strontium and cesium capsules to dry storage. Ensure funding for testing the degradation of concrete storage pools following removal of capsules to allow this data to increase safety everywhere that concrete and radiation are interacting.
- **Hanford Waste Treated Onsite**: Restore onsite capacity for treating Hanford waste that is currently sent to Perma-Fix Northwest.
- **Worker Health and Safety**: Ensure worker training and personal protective gear, including supplied air for protection from toxic chemical vapors in Hanford's tank farms.
- **New Tanks**: Start the process for building new tanks and increase readiness and quick-to-implement infrastructure for emergency pumping of leaking tanks.
- **Leak Response Plan**: Develop a comprehensive long-term plan to address Single-Shell Tank leak detection, characterization, mitigation, cleanup, and communication.

DELAY TANK CLOSURE: Don't spend resources on tank farm closure.

INCREASE TRANSPARENCY: Open the field office budget submittal process and share field office budget planning details. These numbers provide the context needed to write meaningful comments.
