

## **Summary**

### **ensoco well location bundling concept**

### **“solving well location problems”**

#### **SOLVE WELL LOCATION PROBLEMS**

- *Start at well level*
- *Need knowledge & expertise to improve confidence in well location coordinates*
- *Need reasons why well location coordinates are correct or not*
- *Need to create well database with coordinates that are reliable & usable*

#### **EXPANDING WELL LOCATION PROBLEMS**

- *Silo data stores\**
- *Oil & Gas Industry assets imply spatial data issues*
- *Most silos have coordinate information as part of their structure*
- *Resolving silos by data gathering, rationalization, & cleansing yields another silo address*

#### **SOLVING EXPANDED WELL LOCATION PROBLEMS**

- *Connecting silos by sharing & collaboration on common problems*
- *Recognizing the problem exists in both internal & external silos*
- *Horizontal thinking\*\* is sharing with others in order to help others*
- *The technique to take common problems from all silos & collaborate is ensoco well bundling\*\*\**
- *Bundling is horizontal thinking - it enables a solution by using different partners with combined knowledge & expertise to solve problems across silos*

---

*\*Silo Data Stores... most understand the term silos to mean redundant information stored in multiple places fulfilling the needs of a specific group.*

*\*\*Horizontal Thinking... sharing common problems from many silos to help managers and data users - workforce and decision makers using a reliable database - have confidence in their recommendations and decisions*

*\*\*\*Bundling... is taking problems which are common to all and collaborate in a combined effort to solve them... bundling is obviously done by a bundler (ensoco created the well location bundle concept... ensoco well bundle = well data + expertise + partners)*
