

## Water Policy

Water is important to us all as a natural resource. It is essential to the production of our brands and vital to our markets, consumers, and local communities. As an agriculture-based company, Constellation Brands, Inc. recognizes that changes in quantity and/or quality of our water supply can have far-reaching and extended impacts. This is why Constellation believes it is imperative to collectively champion the responsible use of water to reduce the risk to our operations and local communities.

Our dedication to water stewardship is embodied in this Water Policy, which asks employees to consider both the short and long-term impacts on the water source and the watershed community when making business decisions. Consistent with this commitment, Constellation's Water Policy supports the following tenets:

1. Excel in efficient use of water at all facilities
  - Establish specific targets for water usage reduction and water efficiency
  - Understand our water use and discharge in relation to the local watershed
  - Stimulate innovation in water use efficiency through support for facility sustainability initiatives
2. Maintain water source availability and quality
  - Regularly review all facilities' water systems and establish specific action plans
  - Prioritize water programs in areas of high risk
  - Establish contingency plans for incoming water sources and effluent discharge
3. Raise awareness of water access and conservation
  - Educate employees on water issues so that they can become effective water stewards for the company
  - Promote collective action on water issues in local communities where we operate
4. Engage with supply chain on relevant water measures
5. Maintain alignment with Company strategies and values
  - Reduce water usage without compromising safety or quality
  - Demonstrate corporate values and commitments for sustainable development through water stewardship programs
6. Transparency and reporting
  - Disclose targets for water reduction and efforts made to achieve these goals
  - Establish partnerships with relevant stakeholders to collectively address water issues
