

District Dashboard: A Progress Monitoring and Reporting Tool to Improve Student Learning and Organizational Performance.

Presented by John Van Pelt

Brief Description: The dashboard is a progress and reporting tool that enables school districts to monitor and report student learning and organizational performance over time. It is a quick snapshot of district progress relative to its most important goals. The dashboard captures key indicators aligned to strategic long-range goals and is reported on an on-going basis to staff, parents, community, and Board of Education. District leaders and staff focus on three essential questions related to goals and dashboard indicators: Why are we getting the results we are getting? What have we learned? What changes need to occur to improve results?
